

## Time & Money Budget Form

Select up to five in-house and/or outsource Diagnostic Actions that will help you reach a diagnosis of the problem. Keep track of how much time and the cost that each action requires. Remember, the goal is to come to the correct solution by spending the least amount of money, but time is of the essence because the market date is nearing and the symptoms of the disorder are worsening.

Next, answer the questions below to present what you have sorted out.

Diagnostic Action	Time	Cost
Total Cost _____ →		

You may answer on the back of this sheet.

1) Do you have enough information from the crop history and results of the diagnostic actions that you recorded on your Time and Money Budget Form to decide what caused the chlorosis on the cut Dicentra?

a. If so, what do you believe is the cause of the chlorosis, and what specific information led you to this conclusion?

b. If you are not confident about the cause of the problem based on a review of the crop history and results of the diagnostic actions, what steps or diagnostic actions can you take next to determine what caused the chlorosis?
